Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

<p>Module Aims</p> <p>أهداف المادة الدراسية</p>	<p>The aims of a mathematics module are to provide students with an understanding of mathematical concepts, skills, and techniques that can be applied to a range of real-world problems. This includes topics such as An introductory class in the theory and techniques of differentiation and integration of algebraic and trigonometric functions. Additionally, the module aims to prepare students for future academic and professional pursuits that require mathematical proficiency.</p>
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<p>On successful completion of this module, students will be able to:</p> <ol style="list-style-type: none">1. Find the domain and range of a function and graphs.2. Evaluate limits, and determine continuity and differentiability of functions.3. Apply rules of calculus to solve engineering problems including differential equations.4. Differential calculus, these concepts are used to analyze rates of change, optimization problems, and the behavior of functions in engineering applications.5. Integration: Table of integrals, Rules of integration, Definite integrals, Area bounded by curves, Integration by parts, Integration by substitution and using partial fractions.6. Student should use more than one method to solve the integration.7. Express and evaluate a double and triple integral in terms of the Cartesian.8. Calculate area, volume, and surface area of integral.9. Application of Integration: Centres of mass, Moments of inertia.
<p>Indicative Contents</p> <p>المحتويات الإرشادية</p>	<p>The Indicative Contents of a Mathematics module will depend on the level and scope of the course. However, some common topics that may be covered in a mathematics module include:</p> <ol style="list-style-type: none">1- Arithmetic: Basic mathematical operations such as addition, subtraction, multiplication, and division.2- Algebra: The study of mathematical symbols and the rules for manipulating these symbols to solve equations and represent real-world situations.3- Geometry: The study of shapes, sizes, positions, and measurements of objects in space.4- Calculus: The study of mathematical concepts such as limits, derivatives, and integrals. <p>Overall, the Indicative Contents of a Mathematics module aims to provide students with a comprehensive understanding of mathematical concepts and their applications in various fields of study.</p>

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Grading Scheme

مخطط الدرجات

Group	Grade	التقدير	Marks (%)	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 - 49)	FX – Fail	راسب (قيد المعالجة)	(45-49)	More work required but credit awarded
	F – Fail	راسب	(0-44)	Considerable amount of work required

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.
